

HEXABBLE 2.0 – Gameplay Instructions

Overview

HEXABBLE 2.0 is an overhaul from the original HEXABBLE, with New rules, New Tiles, and a completely overhauled Gameboard.

Inspired by Scrabble, the game combines strategic word placement with unique special tiles to create an engaging and dynamic gameplay experience.

You will compete to form words, score points, and outwit opponents on a unique hexagonal board.

Included Items

- **HEXABBLE 2.0 Game Board:** Uniquely designed game board, features a hexagonal design, 17 tile diameter, with Special multiplier spaces across the board.
- **4 Tile Holders:** Designed to hold 7 tiles with a little room for shuffling letters about
- **110 Tiles Total:**
 - 98 Letter Tiles
 - 2 Wild Tiles
 - 2 Omni Wild Tiles
 - 2 Key Wild Tiles
 - 4 Pivot Tiles
 - 2 Thief Tiles
- **55 Multiplier Space Inserts:** These inserts are printed separately to the board, allowing for customization of colours easily, they also function to hold the board together.
- **2 Blank Space Inserts:** Printed in the same colour as the main board, these are extra connectors designed to be invisible once in place.
- **Space Insert Tool:** Used to firmly push the connectors and Multiplier Inserts into place. Can also be used to remove incorrectly places pieces**
 - ***Pushing pieces out of the board if incorrectly places will most likely damage the pieces and may require reprinting.*
- **Tile/Gameboard/Letter Rack Storage:** This is optional but designed to neatly store all included parts.
 - Tile container to hold all tiles when not in use, also used for picking tiles from during gameplay. Has removable lid.
 - Stand to house the Gameplay board, Tile Racks and the Container when not being used.

Special Tiles

- **WILD**
 - Functions as any Singular letter, Remains as intended letter
 - Carries no point value
- **OMNI WILD**
 - Functions as ALL letters ALL the time
 - Carries no point value
- **KEY WILD**
 - Used to unlock additional Starting Spaces (Indicated by Key Symbol)
 - The Key symbols work the same as the initial starting location on the board
 - Can act as standard Wild if no Key Locations are available
 - Carries no point value, however placing on Key Locations is Double Word

- **PIVOT**

- Changes the direction of the word being placed by 60°, as long as the direction is playable (Down, Down Right, Up Right)
- Carries no point value
- Creates a voided space upon placement, which can be placed against without penalty
- Do not impact adjacent (See Gameplay Examples)

- **THIEF**

- Can only be used during the player's own turn, before placing a word
- Allows the player to steal one standard letter tile from an existing word on the board
- The stolen tile is added to the player's rack
- The Thief Tile replaces the stolen tile's position and acts as a wild for that specific letter
- Special tiles (Wild, Key, Pivot, OMNI WILD) cannot be stolen
- Carries no point value

Gameplay Rules

- **Starting Out**

- Each player draws 7 tiles at random, placing them in their tile rack
- The first word must cross the centre space on the board and is scored as a double word
- Scoring is the sum of each letters score, considering any double, or triple letter or word scores.
- At any point a turn may be sacrificed to change any number of tiles held in a players tile rack

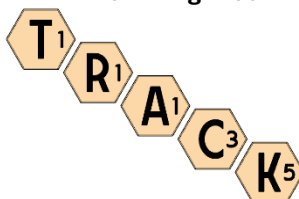

- **Word Placement**

- Words are placed in one of 3 playable directions

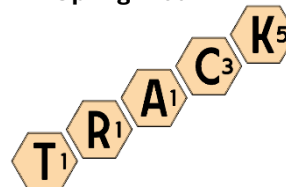

Downward

Down Right 60°

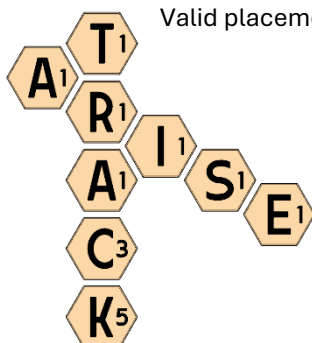

Up Right 60°

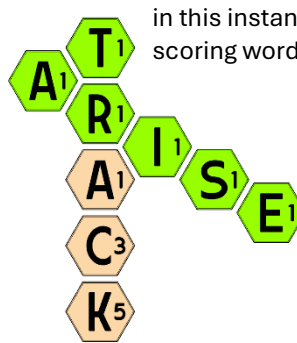

- **Branching words**

- When starting a new word from the middle of an existing word, the new word must run adjacent to the existing word, not parallel—unless each parallel letter placed forms a valid word

Valid placement of an adjacent word

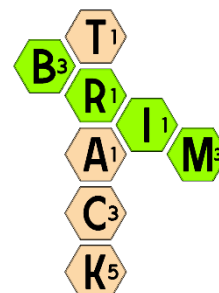

in this instance the placed word forms 2 scoring words: ARISE and AT

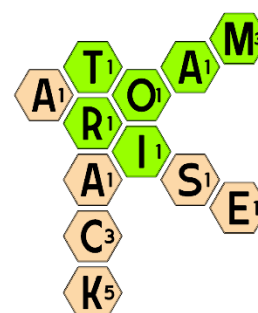

- **Adjacent Letters Rule**

- When placing a word through an existing word, it is impossible to not have letters touch. It is expected that the letters placed on either side of an existing word will be adjacent to an existing letter and may not form playable words.
- When the word placed touches more than 2 letters (The letter being placed against and the adjacent letter) then the word is unplayable**
- ** Unless a playable word is formed with one of the adjacent letters.
- There may only ever be a maximum of 1 invalid adjacent letter touching one played tile

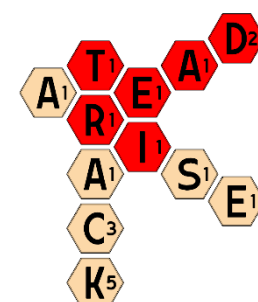

- Standard word placement with single adjacent tiles next to the B in BRIM and the I in BRIM

- A Valid TRIPLE Adjacent placement
- Placing ROAM, the O is Adjacent to T in Track and I in Arise, Forming TO and OI

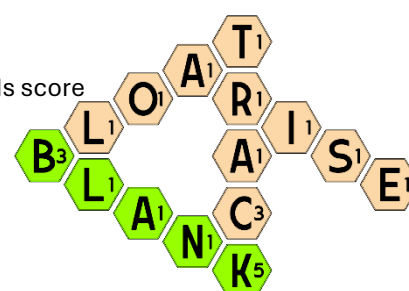

- An Invalid Triple Adjacent Placement
- Placing READ, the E is Adjacent to T in Track and I In Arise, neither form valid words therefore this placement is Invalid

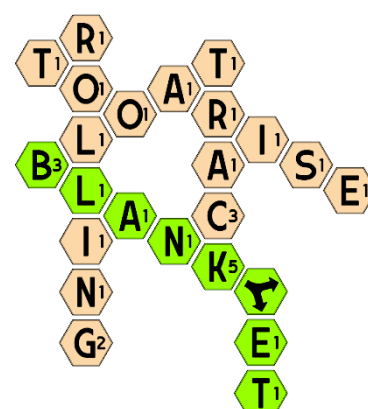

- **Bridging Words Bonus**

- When 2 words are bridged a bonus of **10 points** is added to the played words score
- In this example the word BLANK is used to bridge BLOAT and TRACK
- Bridges can be formed at any point but must form correct words, considering the Adjacent Tile Rules

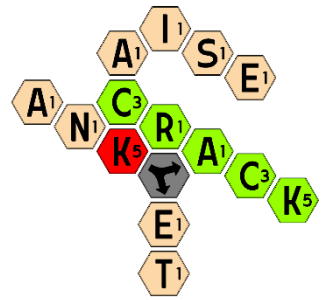

- **PIVOT Tile Placement**

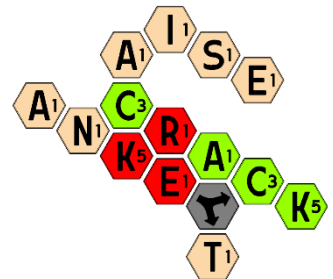

- Placed at any point to change the direction of a word by 60°
- Can be placed mid word, to branch off an otherwise unplayable word or to strategically bridge 2 words. Even to cross multiple Multipliers!
- A standard usage of a PIVOT being used is shown
- If a PIVOT tile has a PLAYABLE direction left open, If Valid a word can be continued from it, for example, BLANKED could be played here.

- PIVOT tiles when placed are effectively a VOIDED space
- They can be placed against without counting as an adjacent tile
- In the picture CRACK is placed running along a word but is only a single unplayable adjacent tile with the K before the PIVOT

- In this variation the PIVOT is 1 tile lower
- This makes the same placement of the word CRACK unplayable, as the R has 2 Unplayable Adjacent tiles with K and E, again the PIVOT is a VOIDED Space and has no impact.

• Using the THIEF tile

- If the THIEF tile is in your Rack, at the start of your turn it may be used to swap with any STANDARD LETTER tile which has been placed on the board. It acts as a WILD for the Letter it replaces and has no value
- The purpose is to use it to gain a letter with value
- Use Wisely!

Scoring Rules

• Letter Values

- Standard letters use the standard Scrabble Letter Values

• Letter and Word Multipliers

- If a word spans more than one multiplier space, the Multipliers are combined. for example, a Double word and Triple word would result in a 5x Word Multiplier
- The same applies to any letter multipliers, and Letter multipliers are used in scoring before applying any word multipliers.

• Two-Letter words

- If any valid Two-Letter words are formed by adjacent letters, the points for the are added to the score

• Challenge Rules

- If a word is played and found to be invalid, the letters remain on the board, no score is applied, and the player loses that turn.

• Full Rack Bonus (7 Tiles)

- If a player can use their full rack in a single turn a bonus of 25 points is added

• Game Ending Conditions

- A Player places their last tile. Each remaining player gets one final turn
- OR
- No Valid Playable words remain – If all players agree then the game ends

• Final Scoring

- Subtract the value of any unused Standard Letter Tiles from each player's score
- Subtract 5 points for each unused special tile (WILD, KEY WILD, OMNI WILD, THIEF and PIVOT)
- The player with the highest final score wins!

House Rules

Like so many board games, people make their own house rules. Please give it a try as is and if you like something to be different then play your own way!

Try making all word directions valid, up and left or straight up, why not! Change Point bonus amounts, Limit the time per round. Make it your own! If you find something works, let the community know!

Thank you for playing!
