

BUZZELLO

TABLETOP RULES

2 players | Classic: 61 cells | Large: 91 cells | Yellow moves first

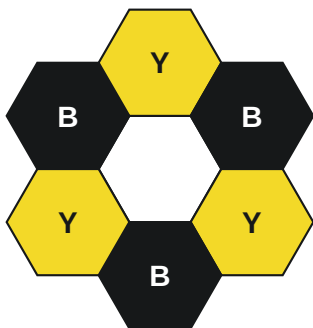

Win the hive

Finish with more pieces showing your color than your opponent. Each occupied hex counts as one piece.

Set up

Choose one complete board edition. Use the same 1.3-inch reversible black/yellow pieces for either size. Keep a shared supply: 61 pieces for Classic or 91 for Large.

Leave the center empty. Put three Yellow and three Black pieces in alternating order around it. Use the board's starting marks or the diagram below. Choose your colors; Yellow takes the first turn.

Y = Yellow B = Black Center = empty

One board, two sizes

Large adds a 30-cell outer ring. The opening, legal moves, flipping and victory rules are identical. Do not mix Classic and Large printed sections.

1. Place one piece

Put a piece of your color in an empty cell. The move must trap at least one opposing piece in a straight, unbroken line between your new piece and another piece already showing your color.

2. Flip every trapped line

Check all six directions from the new piece. Flip every opposing piece in each qualifying line to your color. You must flip all such lines.

An empty cell or board edge breaks a line. Lines cannot bend or jump. Flipped pieces do not start extra chain-reaction captures.

Example: Yellow plays at the left

The two Black pieces turn Yellow. This works along any straight hex direction.

3. Take turns - or pass

Black plays next, then alternate. If you have no legal move, you must pass. You may not pass when a legal move exists. If your opponent can move, they play again.

End and score

Stop when neither player has a legal move, the board is full, or one color has no pieces left. Count the visible Yellow and Black pieces. Higher count wins; equal counts are a draw. Empty cells score nothing.
